

Automated Virtual Workforce

Vysiion Automation is a highly flexible, intelligent robotic process automation platform powered by Thoughtonomy and hosted on Microsoft Azure. It uses software to replicate the way people work in existing applications and systems.

Key features of Vysiion Automation:

- Capable of automating an unlimited number of processes
- Can manage processes using legacy or external systems
- Improves employee satisfaction and makes better use of human skills by removing mundane, repetitive tasks
- Instantly responsive to changes in demand and variable demand
- Follows a defined workflow and guidelines
- Will provide consistent execution and a complete audit trail
- Can operate 24/7/365
